

# **LIFESTYLE CHATBOT**

## **ABSTRACT**

A Chatbot is a computer operating system which spark the person's discussion between voice message or live chats. Chatbot, is made up of artificial intelligence that can be inserted and can be used for many major applications. This interacts between people and user, which increases customer experience. This chatbot makes you to feel good about your day and it will boost up your mind in any situation like happy, sad, tired or lazy. And it even tells about importance of food to have on time without skipping. This bot has Facebook integration and done through software called chat fuel. This makes the user think that they are chatting with a human being (like we share our feelings with friends) but where we are chatting with computer. And it helps every individual to overcome their stress, workload, etc....it's like relaxation chat. Nowadays people started to take medicines for their stress, for peace of mind. This will chatbot will avoid these problems and get you, to know you better. As we all know being physically active, eating healthy and being hygiene plays a vital role for healthy lifestyle, there are other methods which helps as to an individual wellbeing. And you will also be able to manage a stable stress which gives you a better path or approach. This is known for comfort, or being in a state of optimal physical, mental, emotional and for social well-being. And also, it is like motivation to every user who are using this chatbot and to boost up their minds and get them out of tiredness or lazy or in sad situation. It develops you to know you better what is your favorite thing and so on

# **1. INTRODUCTION:**

## **1.1 GENERAL:**

Lifestyle is like our own choice like doing physical activity, stress reduction, spending time to sleep or being hygiene. If you are proper in your like 24-hours biological clock (circadian rhythm) follow them and maintain them as same. If you need any practice in 24-hours biological clock means do change it and improve and give extra care to your lifestyle. For example, having a good sleep will be help you feel better and keep you strong and healthy hygiene always, so on.

Lack of sleep, without any physical activities, unbalanced diet, stress, and not in healthy hygiene will always affect your health and reduces your immune system. For example, giving movements to body helps to have a good sleep and which is required for betterment of health and you will also be able to manage a stable stress which gives you a better path or approach. You can gain everything by qualities of healthy lifestyle by your own choices. It is like insert which we show on our health and wellbeing.

A chatbot is a computer operating software that help in having conversation with users in a common way. This Constant growth in Information Technology and communications has made artificial intelligence more advance. Artificial Intelligence approach uses human activities like taking decisions at a required time, and carry out the everyday tasks, and giving reply to users in quicker way and solving their queries in the way same as same human do.

Lifestyle is always a crucial role in making positive opinions to boost an individual health and wellbeing or comfort. As we all know being physically active, eating healthy and being hygiene plays a vital role for healthy lifestyle, there are other methods which helps as to an individual wellbeing. This is known for comfort, or being in a state of optimal physical, mental, emotional and for social well-being. And also, it is like motivation to every user who are using this chatbot and to boost up their minds and get them out of tiredness or lazy or in sad situation. It develops

you to know you better what is your favorite thing and so on.

## **1.2 MOTIVATION**

Lifestyle of a people is more important for their 24-hour biological rhythm which helps them to do their work or perform function in right time. It avoids getting stress, lack of sleep, etc. This chatbot helps you to reduce stress, have proper sleep, get peaceful mind and so on. Even it helps you to know more about yourself and for what things you are excited and your favorite things which get back to your childhood memories. This chatbot helps to you boost up your mind in any situation. It is like casual interaction with a user through computer operating system like how humans have conversation.

For example: sharing our feelings whether happy or sad with our closed ones.. same as the chatbot will ask like happy, sad, tired or lazy.

## **1.3 OBJECTIVES:**

The objectives of the following would be based on outcomes of the project.

- To give temporary relief to the people who are more stressed from workload, family problems and to have proper sleep cycle and to boost up the mind.
- To prevent the people from taking medicines for sleep and reducing stress which creates many side effects and depression.
- To provide interaction with user who might be sad or tired, which change their state of mind and be happy and do what things they like the most and peaceful mind.
- To give hope to the people that the everything is fine and everything happens for reason and we should be a sun for our life not darkest night.

## **1.4 CHATFUEL**

Chatfuel is first and foremost a powerful chatbot builder that focuses on automation and versatility. Its main focus is building bots that can do it all, from answering questions to collecting emails. Chatfuel creates bots by using content blocks. These are sections of content that appear on the Messenger bot. Chatfuel is a bot builder for FB bots. It has a visual development environment, so you can click and add blocks of functionality like “Text Card” to send a text response and other blocks to send images etc. You can build a really simple bot quickly. Deployment to FB Messenger is easy. They do it for you so no need to go create FB dev accounts, approvals etc. Chatfuel is the largest bot-building platform on Messenger. Automate your Facebook page inbox, create a bot for marketing, sales, and support using our visual 'drag-and-drop' interface.

Chatfuel makes it easy to build a bot of any complexity that helps you get more customers on autopilot and increase sales. Chatfuel includes a user-friendly editor, enabling users to add, edit and design chatbots simply without knowledge of programming or coding. Chatfuel supports integration with a number of services including Facebook, Twitter and Evernote, allowing users to sync their bot with popular applications easily..

### **1.5 DRAWBACKS OF EXISTING SYSTEM:**

The existing projects are based on the text, messages and pictures that are posted in social network through which emotions are expressed by people, but it is not accurate to predict whether the person is happy or sad with social media posts. The projects are only focused on a Facebook users which integrated to Facebook and have particular set of people to process not worldwide. Most of the researches focus only on the problem they never tend to explain about the solution for the problem in the existing systems.

### **1.6 PROPOSED SYSTEM:**

The many problems that many individuals face nowadays are because of stress or

workload then lack of sleep, spending time with closed ones and stressing them to solve their problems and managing different emotions.

In this project, I prepared chatbot which helps users to know about their state of mind through emotions like happy, sad, tired, lazy, etc., so first the user should answer the quires like did you had your breakfast, lunch or dinner and then the chatbot will tell them importance of breakfast, lunch or dinner importance if they skipped it. And then the user is asked to select how you are feeling today like happy, sad, tired or lazy.

If the user selects being happy means quotes and jokes will be displayed. If the user select sad means story, songs and quotes will display and ask them to choose any one. If they choose story means inspirational story will display and moral of it will the life values and if the user choose songs means they are asked to guess the songs using their lyrics like a game to boost up their mind and if the user select quotes means some positive and motivational quotes will pop up to boost up their mind from sad to peaceful.

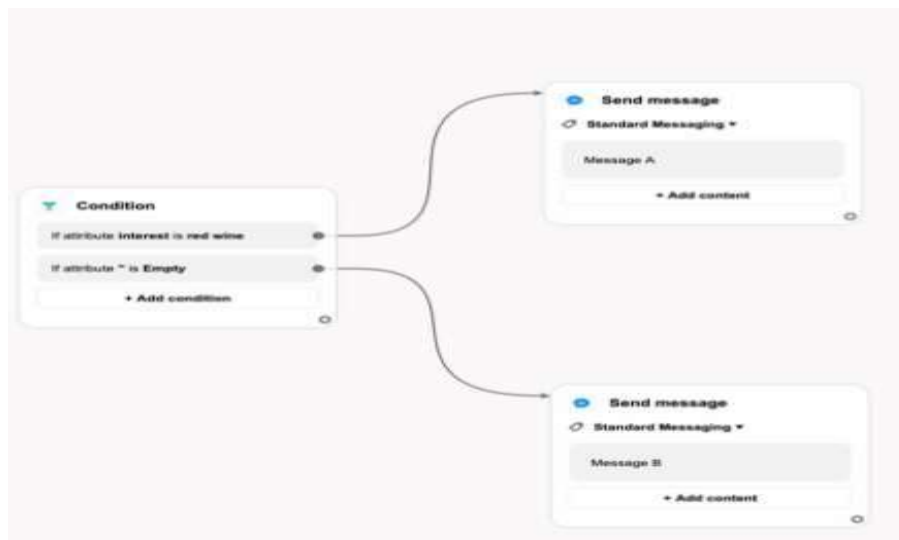

And then if the user selects tired means same two options will display like preparing healthy soup or like a quiz game, if the user select healthy soup means ingredient and how to prepare it by step by step and if the user select game means the quiz like questions pop up like for what they are excited for example park or beach which will boost up their excitement and get rid of tiredness. If the user selects lazy means like it suggests go for walk, sleep, listen to song, express yourself in art or reading.

If user select go for walk means it suggest like observe nature, if user select songs means it suggest listen to your favorite songs or artists whom you like and if user likes reading means it suggests the famous authors you like the most. And atlast the chatbot thank the user for spending their precious time for chatting with it and hope they are better from their mind and had boost up it.

## 2. SYSTEM DESIGN

### 2.1 ARCHITECTURE DIAGRAM

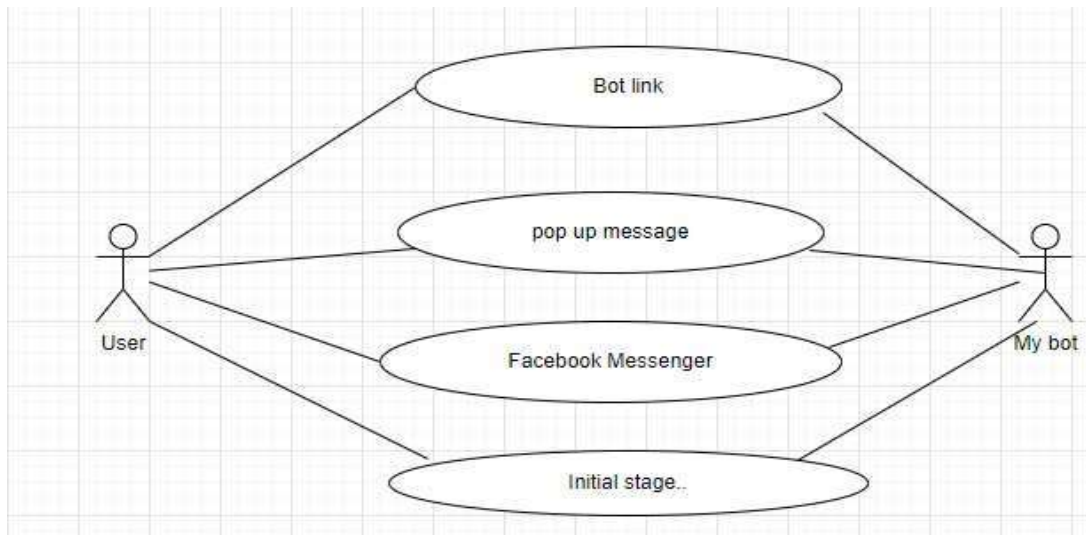

The user will access the bot and post a query in the chat window. The bot will search the intents and then it will check in the external web hooks like API and Database that we integrated. If the intent is found it will check the training phases, action and parameters if required and then it produces the response to the user.

### 2.2 DESIGN OF THE ENTIRE USER SYSTEM:

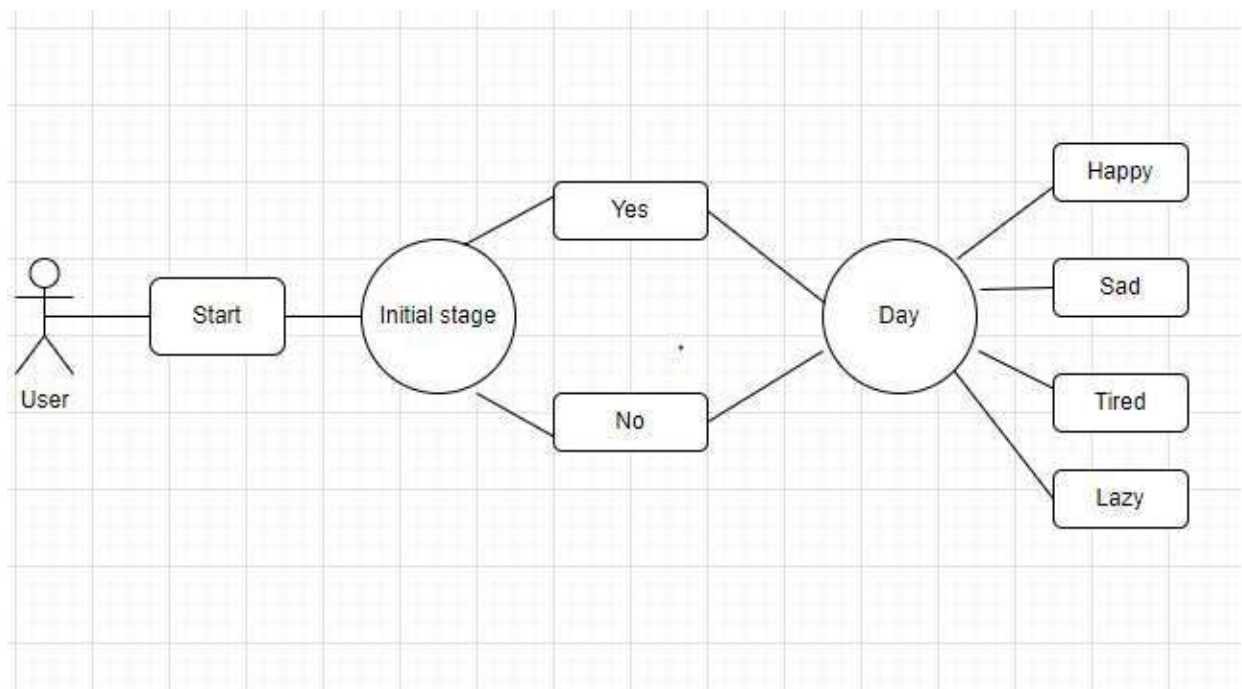

#### 2.2.1 USE CASE DIAGRAM

A use case diagram is a graphical depiction of a user's possible interactions with a system. A use case diagram shows various use cases and different types of users the system has and will often be accompanied by other types of diagrams as well. The use cases are represented by either circles or ellipses. The actors are often shown as stick figures.

### 2.2.2 SYSTEM ARCHITECTURE DIAGRAM

An architectural diagram is a diagram of a system that is used to abstract the overall outline of the software system and the relationships, constraints, and boundaries between components. It is an important tool as it provides an overall view of the physical deployment of the software system and its evolution roadmap.

### **3. MODULE DESCRIPTION:**

A module is a software component or part of a program that contains one or more routines. One or more independently developed modules make up a program. The depression chatbot is created using the list of modules such as

- Bot Creation
- Chatfuel Messenger
- Facebook Messenger

#### **3.1 BOT CREATION:**

The bot consists of lifestyle bot which deals with features, integrations available in the bot. The bot has a pop-up messenger when the website is opened which displays a welcome message and with block and flows. The bot will have access through a button option. Then the bot is connected to Facebook page and the bot link is created.

#### **3.2 CHATFUEL MESSANGER:**

The messenger bot appears as a pop-up with a welcome message when the user accesses the website. The messenger bot is inbuilt with rich messages like button options, images, video, audio, redirect, etc. Through this feature we can add buttons, images, videos, audios, live chat, chips that direct you to welcome message new page. It enhances the feature of the bot and attracts the user.

### 3.3 FACEBOOK MESSANGER

The Lifestyle bot is also made available in Facebook messenger. If the user finds it difficult to access the link each time to use the chatbot, they can make use of Facebook messenger app. The user can access the Lifestyle bot which is connected to Facebook page and access the messenger to use the chatbot. The user can also download the messenger app and chat with the Lifestyle bot. This will save the time of user as the user can access the bot without accessing the link. The Facebook Messenger integration also has rich messages facilities like images, audio and videos etc. This feature is enabled using Facebook integrated with platform chatfuel.

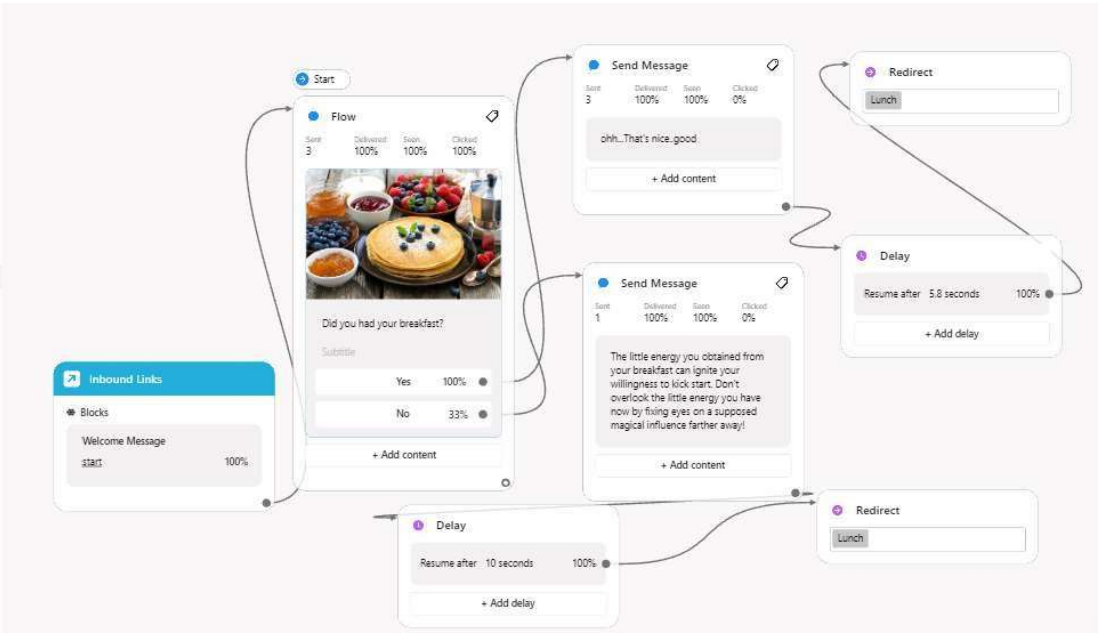

## 4. IMPLEMENTATION AND RESULTS: WELCOME MESSAGE

The screenshot displays the Chatfuel interface for configuring a bot's welcome message. On the left, a sidebar contains a search bar and a list of blocks. The 'Welcome Message' block is selected and highlighted in blue. Below it, the 'Default Answer' block is visible. The main area on the right shows the configuration for the 'Welcome Message' block. It includes a toggle switch for 'Welcome Message' and a 'LINK' button. Under 'Inbound links', 'Facebook Page' is listed. Under 'Outbound links', 'Breakfast' is listed. The 'Hi! Nice to see you.' message is shown, followed by an 'ADD BUTTON (OPTIONAL)' button. Below this, a 'Show "typing..." for at least' slider is set to 2 seconds. At the bottom, a preview of the welcome message is shown: 'Hi (first name), I'm chatbot of lifestyle. I will help you to get day more peaceful.. what would you like to do?'. A 'start' button is visible at the bottom of the preview.

Story

A philosophy professor once stood in front of his class with a large empty mayonnaise jar. He filled the jar with large stones and asked his students if the jar was full. All his students in his class agreed that the jar was full. Then he added small pebbles to the jar and jerked the jar so that the pebbles could disperse between the larger rocks. Then he asked again, "Is the jar full now?" The pupils agreed that the jar was still full. The professor then poured sand into the jar to fill all the remaining space. The pupils then agreed again that the jar was full.

Moral

In this story, the jar represents your life and rocks, pebbles and sand are the things that fill your life. Rocks represent the most important projects and things you have going on, such as spending time with your family and maintaining proper health. This means that if pebbles and sand were lost, the jar would still be full and your life would still have meaning. Pebbles represent the things in your life that matter, but you could live without. Pebbles are certainly things that give meaning to your life (like your job, home, hobbies, and friendships), but they are not fundamental to having a meaningful life.

These things often come and go and are not permanent or essential to your general well-being.

Finally, the sand represents the remaining filling things in your life and material goods. It could be little things like watching television, browsing through your favorite social media site, or running errands. These things don't mean much to your life as a whole, and are probably only done to waste time or accomplish small tasks.

Healthy soup

## Steps

The steps contain 12 steps. To prepare soup. Just for sample I had kept the output.

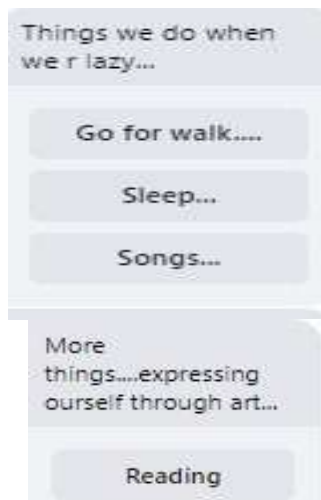

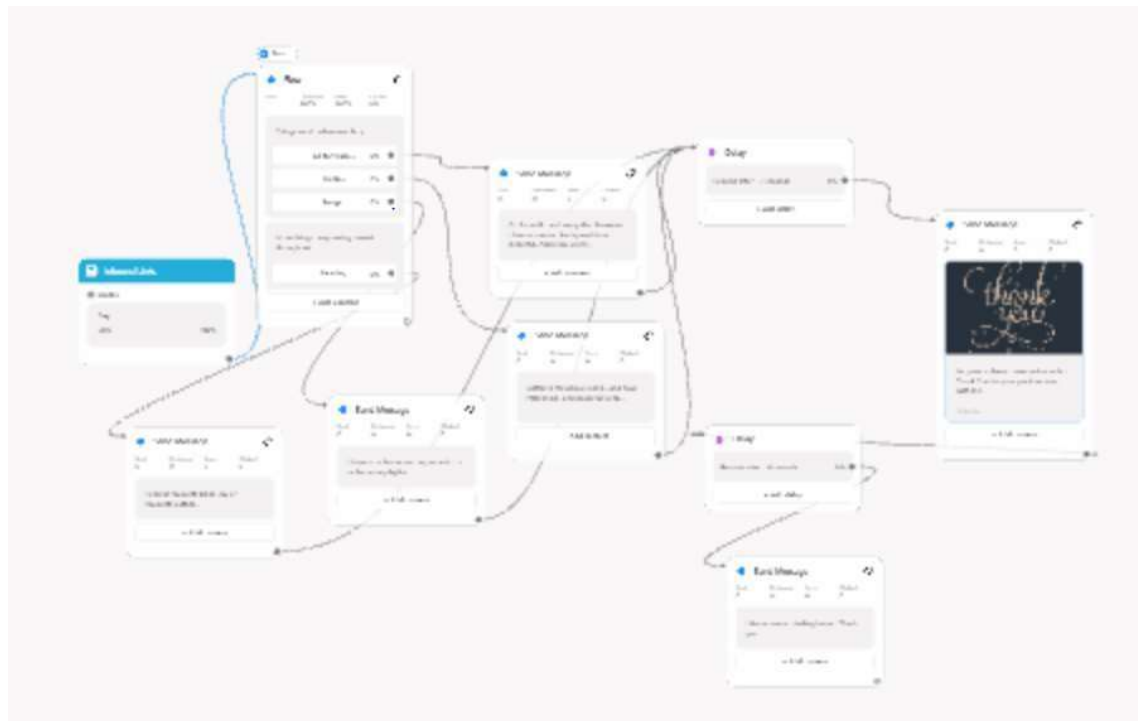

## Game

In same model we have 5 to 6 questions to attend where the user has to choose their favorite things, place or destination. After completing this the user display thank you message.

# Lazy

So, when the user click:

- Go for walk – pop up as observe nature and enjoy the climate and environment.
- Sleep – Have a good and peaceful sleep which get rid of laziness.
- Song – listen to your favorite songs or artist
- Reading – read the book which makes you more interesting and favorite to you.

And after completing the user display thank you message.

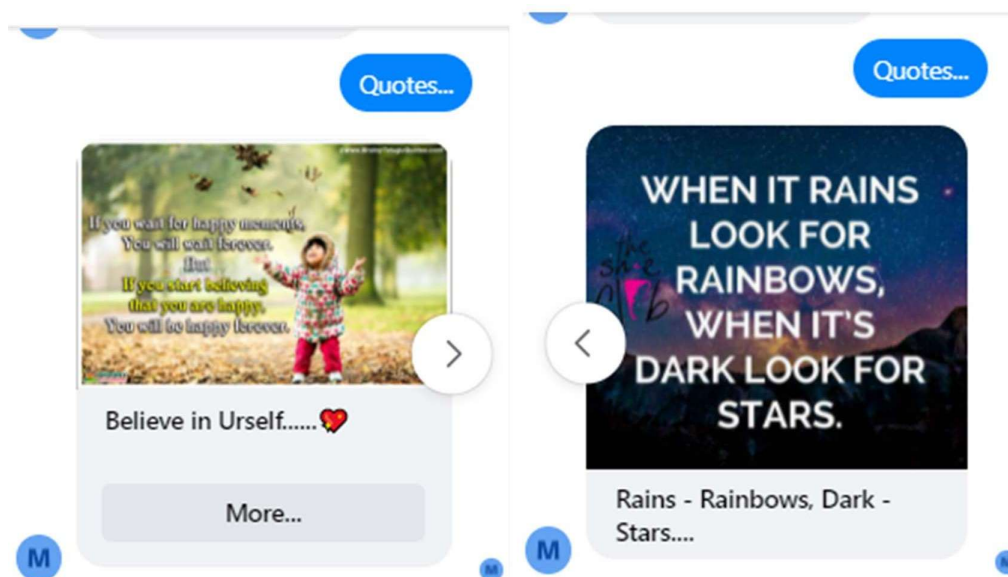

## 5. SYSTEM TESTING WITH TEST CASES

## **6. FUTURE WORK AND CONCLUSION FUTURE WORK**

The future scope is now the chatbot is only available for Facebook login that is messenger. So in future we can develop for all social media app like Instagram, etc. And we can check whether we can be able to be add videos or audios in the chatbot and give like motivational speech or video.

## **CONCLUSION**

Chatbots or smart assistants with artificial intelligence are dramatically changing businesses. Chatbots can reach out to a large audience on messaging apps and be more effective than humans. They may develop into a capable information-gathering tool in the near future. Chatbots are a new, emerging space. This project helps the user to get know their day better and boost up their mind in whatever situation they are. As the project allows user of an every individual to choose their choice, activities and emotions which increases their lifestyle and health well-being.
