

LIFESTYLE CHATBOT

Abstract

A Chatbot is a computer operating system which spark the person's discussion between voice message or live chats. Chatbot, is made up of [artificial intelligence](#) that can be inserted and can be used for many major applications. This interacts between people and user, which increases customer experience. This chatbot makes you to feel good about your day and it will boost up your mind in any situation like happy, sad, tired or lazy. And it even tells about importance of food to have on time without skipping. This bot has Facebook integration and done through software called chat fuel. This makes the user think that they are chatting with a human being (like we share our feelings with friends) but where we are chatting with computer. And it helps every individual to overcome their stress, workload, etc....it's like relaxation chat. Nowadays people started to take medicines for their stress, for peace of mind. This will chatbot will avoid these problems and get you, to know you better.

Need for the Proposed System

- I prepared chatbot which helps users to know about their state of mind through emotions like happy, sad, tired, lazy, etc., so first the user should answer the queries like did you had your breakfast, lunch or dinner and then the chatbot will tell them importance of breakfast, lunch or dinner importance if they skipped it.
- And then the user is asked to select how you are feeling today like happy, sad, tired or lazy.
- Users select any button means different ways method pop up to boost your mind.

Advantages of the Proposed System

- Know their state of mind
- .Get to them more better
- Know about their interest and what they are excited for
- And favorite things they like the most...

Main Objective

The objectives of the following would be based on outcomes of the project.

- To give temporary relief to the people who are more stressed from workload, family problems and to have proper sleep cycle and to boost up the mind.
- To prevent the people from taking medicines for sleep and reducing stress which creates many side effects and depression.
- To provide interaction with user who might be sad or tired, which change their state of mind and be happy and do what things they like the most and peaceful mind.
- To give hope to the people that the everything is fine and everything happens for reason and we should be a sun for our life not darkest night.

Architecture

Functional Description

- **BOT CREATION**

The bot consists of lifestyle bot which deals with features, integrations available in the bot. The bot has a pop-up messenger when the website is opened which displays a welcome message and with block and flows. The bot will have access through a button option. Then the bot is connected to Facebook page and the bot link is created.

- **CHATFUEL MESSENGER**

The messenger bot appears as a pop-up with a welcome message when the user accesses the website. The messenger bot is inbuilt with rich messages like button options, images, video, audio, redirect, etc. Through this feature we can add buttons, images, videos, audios, live chat, chips that direct you to welcome message new page. It enhances the feature of the bot and attracts the user.

Sad- story....

A philosophy professor once stood in front of his class with a large empty mayonnaise jar. He filled the jar with large stones and asked his students if the jar was full.

All his students in his class agreed that the jar was full.

Then he added small pebbles to the jar and jerked the jar so that the pebbles could disperse between the larger rocks. Then he asked again, "Is the jar full now?" The pupils agreed that the jar was still full.

The professor then poured sand into the jar to fill all the remaining space.

The pupils then agreed again that the jar was full.

Moral

In this story, the jar represents your life and rocks, pebbles and sand are the things that fill your life. Rocks represent the most important projects and things you have going on, such as spending time with your family and maintaining proper health. This means that if pebbles and sand were lost, the jar would still be full and your life would still have meaning. Pebbles represent the things in your life that matter, but you could live without. Pebbles are certainly things that give meaning to your life (like your job, home, hobbies, and friendships), but they are not fundamental to having a meaningful life.

These things often come and go and are not permanent or essential to your general well-being.

Finally, the sand represents the remaining filling things in your life and material goods. It could be little things like watching television, browsing through your favorite social media site, or running errands. These things don't mean much to your life as a whole, and are probably only done to waste time or accomplish small tasks.

If the user select tired..

Implementation and Testing

Tired – Healthy soup

2 tablespoons chopped Spring Onion (or normal onion)
2 teaspoons minced Garlic
1/3 cup chopped Carrots
1/3 cup chopped Green Cabbage
1/3 cup Sweet Corn Kernels
1/3 cup chopped French Beans
1/4 teaspoon Ground Black Pepper
1/2 tablespoon tablespoon Vinegar
2 tablespoons Cornstarch (white corn flour)
1/2 tablespoon Butter or Oil
2 1/2 cups Water or Vegetable Stock
Salt to taste

Steps...

Steps

Step - 1

Chop all the veggies (carrot, cabbage, french beans, onion and garlic) into small.

The steps contain 12 steps. To prepare soup. Just for sample I had kept the output.

Implementation and Testing

Tired – Game

Game

In same model we have 5 to 6 questions to attend where the user has to choose their favorite things, place or destination. After completing this the user display thank you message.

Implementation and Testing

If user selects lazy means....

So, when the user click:

Go for walk – pop up as observe nature and enjoy the climate and environment.

Sleep – Have a good and peaceful sleep which get rid of laziness.

Song – listen to your favorite songs or artist

Reading – read the book which makes you more interesting and favorite to you.

Its great to have
conservation with u.
Thank You for your ...

I Hope now u r feeling
better...Thank you

Conclusions

Chatbots or smart assistants with artificial intelligence are dramatically changing businesses. Chatbots can reach out to a large audience on messaging apps and be more effective than humans. They may develop into a capable information-gathering tool in the near future. Chatbots are a new, emerging space. This project helps the user to get know their day better and boost up their mind in whatever situation they are. As the project allows user of an every individual to choose their choice, activities and emotions which increases their lifestyle and health well-being.

Future Enhancement

- The future scope is now the chatbot is only available for Facebook login that is messenger. So in future we can develop for all social media app like Instagram, etc
- And we can check whether we can be able to be add videos or audios in the chatbot and give like motivational speech or video.
